

### Features:

A "One Card" campus fully integrated with the ScholarChip 3-Tier architecture

District-wide, secure, real-time

Integrated with the ScholarChip Data Center

Data export available using the ScholarChip API

Wall Mounted Attendance Board or a small USB device

Audio & Visual feedback as to card read, class & attendance status

Displays student photos

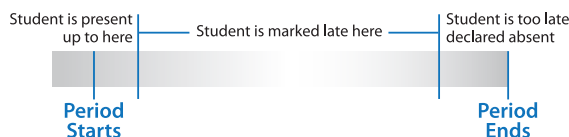

Automatic reconciliation with Building Attendance

### Advantages:

Fast

More time on task

Uniform real-time attendance

## ScholarChip® Card-Based Classroom Attendance

Automated Card-Based Classroom Attendance allows any classroom to completely automate real-time attendance taking. The system verifies correct class and period, student status (allowed or suspended) and records the correct attendance status: present, tardy (excused/unexcused), or too tardy to be present. Card readers may be wall mounted or connected to the teacher's classroom PC. It requires no teacher intervention and is faster than manual attendance taking, resulting in more time on task. Card-based attendance removes the variables inherent in teacher-based classroom attendance, providing administrators with more reliable and uniform attendance data.
